

Live Slides

1. Read the microscope use procedures.
2. There is a jar of live micro-organisms at this station. Use the pipette to place a small amount of water containing the organisms in the well of the slide.
3. Observe using low power, then observe using high power.
4. Draw and color what you observe.
5. Write a short description of your observations.
6. Label the magnification you used to make the observations.

When you are finished, put the slides away, and turn off the microscope correctly.

Microscope Observations
