

# Regular VOLUME

To find the volume of squares or rectangles shape, multiply the length by the width by the height (l x w x h).

$$5.5 \times 2 \times 4 = 44\text{cm}^3$$

The volume of solids is measured in  $\text{cm}^3$  or *cubic centimeters* (cc).

$$1 \text{ cc} = 1 \text{ ml}$$

## WHAT TO DO:

There are 5 different objects at this station.

1. Pick up one of the objects (it doesn't matter which one). Write the name of the object on your answer sheet.
2. **Estimate** the volume of the object in cc.
3. Record this estimation in on your answer sheet.
4. Find the actual volume of the object using the formula  $L \times W \times H$
5. Record the actual volume of the object on your answer sheet.
6. Repeat each step with each object.
